fixable in the \$299 quick
fix

Top 5 things I would fix first

1. Text with too little contrast

Accessibility · serious

Elements must meet minimum color contrast ratio thresholds

`.text-white\`/45 (contrast 4.48:1, needs 4.5:1)

Fix: Raise text contrast to WCAG AA (4.5:1 body, 3:1 large text). in \$299 quick fix

Source: axe-core · seen on desktop

2. Visible label differs from accessible name

Accessibility · serious

Elements must have their visible text as part of their accessible name

`a[href$="#top"]`

Fix: Elements must have their visible text as part of their accessible name in \$299 quick fix

Source: axe-core · seen on desktop

3. Undersized functional text

Design quality · warning · ×4

Interactive and content-bearing UI text (links, buttons, nav items, labels, table cells, meta rows, timecodes) below 11px is a legibility failure, not a style choice.

9px functional text "AI Try-On" (below 11px floor)

9px functional text "AI Try-On" (below 10px floor)

Fix: Raise button/label text to at least 14px so controls are readable and tappable.

in \$299 quick fix

Source: Impeccable · seen on desktop + mobile

4. Slow on mobile (Performance 52/100)

Performance · serious

Most launch traffic is mobile; LCP over 2.5s loses visitors.

LCP 5.1s, TBT 824ms, CLS 0.002

Reduce unused CSS (~0.5s)

Reduce unused JavaScript (~0.5s)

Fix: Compress/resize hero images (WebP/AVIF), lazy-load below the fold, split the JS bundle, preload the main font. in \$299 quick fix

Source: Lighthouse · seen on mobile (simulated 4G)

5. AI color palette

AI-template tell · warning · ×2

Purple/violet gradients and cyan-on-dark are the most recognizable tells of AI-generated UIs.

Purple/violet gradient background

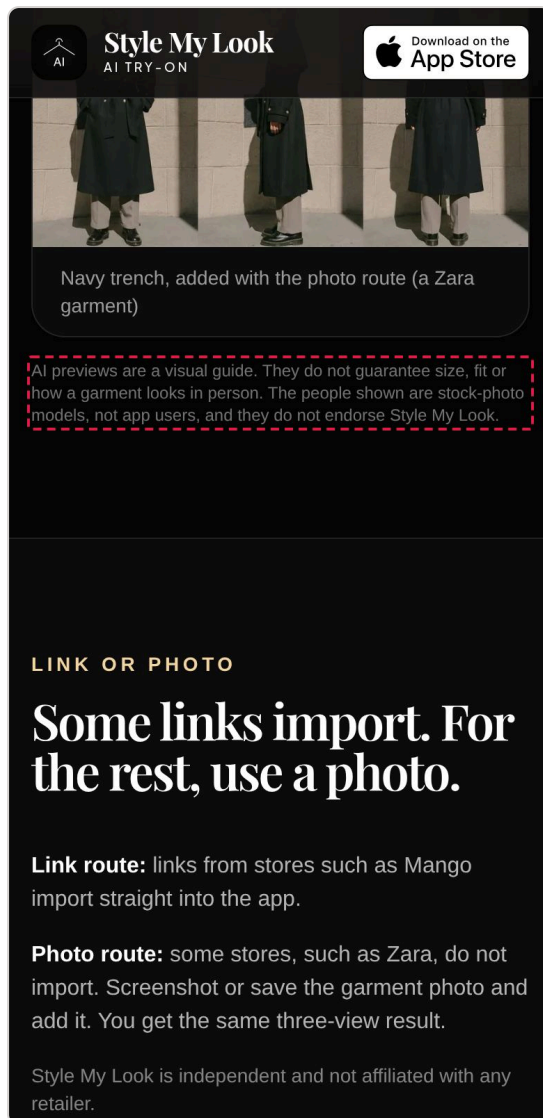

Fix: Replace the default purple/indigo-to-blue AI palette with brand colours. polish sprint

Source: Impeccable · seen on desktop + mobile

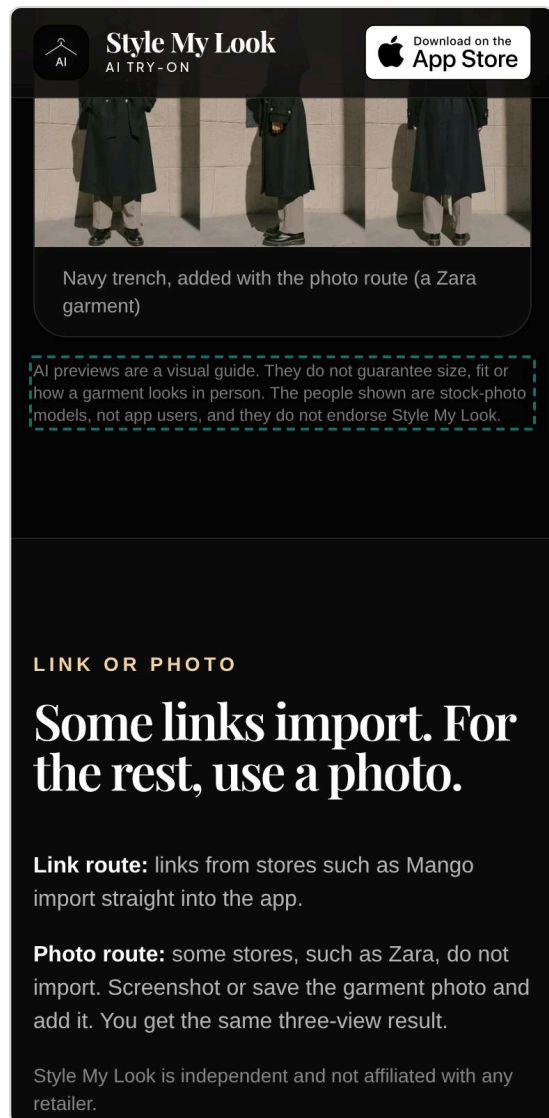

Before / after preview

The "after" images were made by applying CSS changes in a local browser only. Nothing on the live site was changed.

Dashed boxes mark the changed elements: red is now, green is fixed. These are the mechanical fixes (contrast, line-height, line length). The paid fix also covers changes that need a person: layout, type and copy.

Now (iPhone width, 390px)

After the mechanical fixes (contrast on 2 elements)

What fixing it looks like

\$299

Quick fix, 48h

Everything tagged "quick fix" above, sent as one PR or patch to your repo (Lovable/Bolt/v0 export or GitHub). Re-audit report included.

\$900–1,500

Polish sprint, 3–5 days

Quick fix plus type scale, spacing rhythm, palette and copy pass to remove the template look, plus mobile layout fixes. Before/after report included.

How this was checked

Automated, read-only checks on the public page on 9 Oct 2026: Impeccable 4.1.0 (59 deterministic rules, no LLM) at 1280px and 390px; axe-core 4.14.0 (WCAG 2.1 A/AA + best practice); Google Lighthouse 13.5 (mobile, simulated throttling); plus Shipshape checks for sideways scroll, tap targets, share/SEO metadata and console errors. Automated tools find a subset of issues. A clean result here does not mean the site is accessible or polished. Scores move between runs,

Lighthouse performance especially. Prepared by Dor Avidan · avidandor@gmail.com · <https://doravidan.github.io/shipshape-audit/>.
